DONY

BACKEND ENGINEER / SOFTWARE DEVELOPER

Tangerang, Indonesia • dony.minmin@gmail.com • +62 895-3254-32010 • linkedin.com/in/dony152252238 • github.com/DonyMimin • donymimin.github.io

PROFILE

Backend Engineer with 2+ years of production experience architecting high-availability distributed systems, gamification engines, SSO platforms, and enterprise management tools across **Go**, **.NET 8**, and **Node.js**, with proven fullstack capability in **React** and **Next.js**. Experienced in designing multi-company access governance, secure API integrations, dynamic leaderboard & scoring systems, and robust observability pipelines. Holds a **3.97/4.00 GPA** in Computer Science (**Cum Laude**) and applies strong engineering practices: 90%+ unit test coverage, clean architecture, automated CI/CD pipelines, and low-latency API optimization. Author of published peer-reviewed research in Computer Vision & Deep Learning.

TECHNICAL SKILLS

Languages: Go (Proficient), C#, TypeScript, JavaScript, Python

Backend & Distributed: .NET 8 / ASP.NET Core, Echo, Gin, Express.js, Node.js, Microservices Architecture

Frontend & Modern Web: React.js, Next.js (App Router/SSR), Modern HTML5/CSS3, Single Page Applications

Databases & Storage: PostgreSQL, MySQL, MongoDB, MariaDB, SQL Server, ClickHouse, Redis, OBS Object Storage

DevOps & CI/CD: CI/CD Pipelines (GitHub Actions, GitLab Runner), Docker, Redis, Git, AWS, Postman, Teleport, Linux

Architecture & Security: RESTful APIs, Microservices, Gamification & Points Engine, SSO/OAuth2, Keycloak, RBAC, WAF, Load Balancing, OWASP Top 10 Security

Observability: Traefik, Victoria Metrics, Latency Percentile Analysis (P50-P99), Fluentbit

AI / ML: TensorFlow, OpenCV, Deep Learning, YOLOv8, ResNet-50, CNN

WORK EXPERIENCE

Software Developer | PT. Ifabula Digital Kreasi *March 2025 – Present*

- Engineered a high-performance **Gamification & Points Engine in .NET 8** for an enterprise workforce engagement platform, implementing dynamic point calculation rules, real-time leaderboards, seasonal resets, and consecutive streak tracking to boost employee engagement across learning and attendance modules.
- Extended an **enterprise SSO platform in Go (Golang) & Keycloak** for a major industrial conglomerate beyond app-level authentication to manage multi-company employee access, division-based RBAC, and subcontractor onboarding across 5+ internal applications.
- Architected a compliance-focused **Legal Management System (LMS)** within an enterprise corporate solutions ecosystem, featuring multi-layer security (WAF, Load Balancer, Firewall) against OWASP top threats, OBS object storage, and automated MDM API user synchronization.
- Developed internal project management and tooling microservices utilizing **Go backend services** supporting sprint tracking and team activity monitoring.
- Developed and launched responsive web platforms for multinational maritime & shipping logistics firms using modern web technologies, boosting international web traffic by 40%.
- Integrated observability tooling (Traefik, Victoria Metrics, Fluentbit) for real-time alerting, activity logging, and latency percentile tracking (P50-P99), maintaining 99.9% uptime in production environments.

Backend Developer | PT. Omni Digitama Nusantara (Ruparupa) *Feb 2024 – Feb 2025*

- Maintained and scaled 5+ backend microservices sustaining 99.9% uptime across high-traffic e-commerce workflows.
- Reduced P95 API latency by identifying critical database and service bottlenecks, ensuring consistent response times during peak demand.
- Achieved >90% unit test coverage across core microservices, increasing release stability and reducing production regressions.
- Accelerated release cycles by designing and automating internal development & deployment workflows using **CI/CD pipelines (GitHub Actions & GitLab Runner)**, while integrating proactive system monitoring tooling.

Fullstack Developer | Tarumanagara University *Jun 2022 – Jul 2023*

- Led development of a web-based academic journal administration system, digitizing manual editorial workflows for university faculty staff.
- Built RESTful backend services and responsive frontend interfaces, delivering a production-ready system that significantly improved administrative operational efficiency.

PUBLICATIONS & RESEARCH

Deteksi YOLOv8 dan Pengenalan Wajah Menggunakan RESNET50 Pada Gereja *2025*

Authors: Dony, Chairisni Lubis • JATISI (Jurnal Teknik Informatika dan Sistem Informasi), Vol. 12, No. 1 • DOI: 10.35957/jatisi.v12i1.9757

- Published peer-reviewed scientific study on automating congregation seating management and attendance logging through a dual-model computer vision pipeline combining YOLOv8 object detection with ResNet-50 deep convolutional neural networks.

FEATURED PROJECTS

SSO & Identity Platform – Keycloak Integration | *Go, Keycloak, PostgreSQL, Docker*

- Designed a hybrid identity architecture combining Keycloak APIs with local database reference mapping, enabling seamless identity federation across internal applications for 200+ user accounts with zero manual provisioning.

AI Desktop Attendance & Seat Detection System | *Python, YOLOv8, ResNet-50, OpenCV, TensorFlow*

- Built an AI-powered desktop application for real-time seat availability detection using camera feeds, utilizing YOLOv8 for object detection and ResNet-50 CNN for automated attendance recognition. Published in JATISI (DOI: 10.35957/jatisi.v12i1.9757).

EDUCATION

Bachelor of Computer Science | Tarumanagara University *2021 – 2024*

• **GPA: 3.97 / 4.00 (Cum Laude)**
